

Topic 3

Economic Statistics

UNIVERSITY OF MINNESOTA

Driven to DiscoverSM

Agenda

- Recap what we've done so far
- What are we trying to do?
- What exactly GDP is and why it's useful
- How do we calculate GDP?
- NGDP vs. RGDP: How to account for price changes
- Unemployment
- Policy and Unemployment

Let's test your understanding

Which of the following would be included in Japan's 2009 GDP?

| Item | Include? | Reason |
|---|----------|--------|
| In 2009, sale of Starbucks coffee in Tokyo | | |
| In 2009, purchase of land to build a house | | |
| In 2009, sale of a handgun by organized crime | | |
| In 2009, salary of a waiter at a restaurant | | |
| In 2010, sale of Starbucks coffee in Osaka | | |

Let's test your understanding

Which of the following would be included in Japan's 2009 GDP?

| Item | Include? | Reason |
|---|----------|---|
| In 2009, sale of Starbucks coffee in Tokyo | ✓ | |
| In 2009, purchase of land to build a house | ✗ | Transfer of ownership |
| In 2009, sale of a handgun by organized crime | ✗ | Underground economy |
| In 2009, salary of a waiter at a restaurant | ✗ | Intermediate good (part of price of meal) |
| In 2010, sale of Starbucks coffee in Osaka | ✗ | Wrong year |

Review of the abbreviations

- $Y = \text{GDP}$
 - $R = \text{Revenue}$
 - $C = \text{Consumption}$
 - $G = \text{Gov't Spending}$
 - $I = \text{Investment}$
 - $X = \text{Exports}$
 - $M = \text{Imports}$
 - $NX = \text{Net Exports}$
- Therefore we have:
 - $Y = R$
 - $Y = C + G + I + X - M$
 $= C + G + I + NX$

Let's see what this looks like for the USA

- [Data from the Bureau of Economic Analysis](#)
- This is what pundits mean when they say we're a consumption-driven economy
- Also note that our trade deficit (i.e. we import more than we export)

Table 1.1.5. Gross Domestic Product

How do we break up the population?

Example

- Suppose that you know the following information about a city in Econland.

| Full time | Part time | Not working, seeking job | Not working, gave up looking. | Children (under 10) |
|-----------|-----------|--------------------------|-------------------------------|---------------------|
| 225 | 100 | 55 | 85 | 35 |

- (a) Total population? (b) # employed?
(c) # unemployed? (d) labor force?
(e) unemp. rate? (e) participation rate?

Civilian Participation Rate (CIVPART)

Length of Unemployment

- “Most spells of unemployment are short, and most unemployment observed at any given time is long term.” Here’s an example:

| | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec |
|---|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| A | | | | | | | | | | | | |
| B | | | | | | | | | | | | |
| C | | | | | | | | | | | | |
| D | | | | | | | | | | | | |
| E | | | | | | | | | | | | |
| F | | | | | | | | | | | | |
| G | | | | | | | | | | | | |
| H | | | | | | | | | | | | |
| I | | | | | | | | | | | | |
| J | | | | | | | | | | | | |

- Rows are people
- 3 long spells, 7 short spells
- In a given month, more long spells than short spells

Key Ideas and Things To Think About

Note: This is NOT a study guide – i.e. do not limit yourself to these items when studying

Key Ideas

- GDP and how we measure it
 - What's included and what isn't
- Calculating GDP in our model
- Nominal GDP vs Real GDP
 - Why choose one over the other?
 - GDP Deflator and Inflation

Key Ideas

- Unemployment – defining and measuring
- Criticisms of measures
- Natural rate of unemployment
 - Why it isn't zero
- Effect of policies on unemployment

Things To Think About

- Has the economy improved under the current presidential administration?
 - As measured by GDP (nominal and real)
 - As measured by unemployment
- Is it reasonable to use unemployment rate only to describe the economy?
- [Unemployment analysis](#)
